(54) Title: COATING METHOD FOR SHIP-BOTTOM PAINT

(57) Abstract: The present invention relates to a method for coating a ship-bottom paint and more particularly, to a method for coat-  
ing a ship-bottom paint comprising the steps of: coating a coating composition comprising a liquid type room temperature curable  
organic resin, and 10 to 400 weight parts, based on 100 weight parts of the liquid type room temperature curable organic resin, of  
glass powder on the bottom of a ship; and spraying glass beads on the surface of the resin before the resin of the coating composition  
is cured, followed by curing. The method for coating a ship-bottom paint according to the present invention can effectively prevent  
attachment of marine organisms on the ship bottom while simultaneously providing excellent abrasion resistance, durability, impact  
resistance and scratch resistance. Also, the coating can be readily constructed and reduce surface resistance of a large vessel during  
sailing, improving economical efficiency.
